Office Action Summary

Application No.

10/816,422

Applicant(s)

AHUJA ET AL.

Examiner

PHENUEL S. SALOMON

Art Unit

2179

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 July 2009.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5, 25 and 27-33 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-5, 25 and 27-33 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO/S5108)
Paper No(s)/Mail Date 7/2009
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

1. This office action is in response to the amendment filed on July 23, 2009, in which claims 1-5, 25 and 27-33 are pending for further examination.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 25, 27-29 and 32-33 are rejected under 35 U.S.C. 103(a) as being anticipated by Biebesheimer (US 2002/0107843 A1) in view of Piersol (US 6,978,297 B1) and further in view of Dugatkin (US 2005/0021715 A1).

Claim 1: Biebesheimer discloses a method comprising:

presenting a graphical user interface GUI for a capture system, wherein the GUI comprising one or more views including:

a capture rule view (gui) to enable parameters of the capture rule to be defined (p.7, ¶ [0065]).

a search editor view to enable parameters of a search (p.3, ¶ [0030] lines 17-30, fig. 4) but does not disclose tags of objects captured by the capture system to be defined, the capture system configured to intercept data from data streams, reconstruct the data, and store network transmitted objects according

to a capture rule, that defines which objects are to be captured by the capture system, wherein each tag is associated with at least one captured object and includes relevant information that describes the at least one object. However Piersol discloses tags of objects captured by the capture system to be defined (*the metadata file contains special information about the document from the capturing device*) (col. 8, lines 50-56), wherein each tag is associated with at least one captured object and includes relevant information that describes the at least one object (*a unique identifier, such as a serial number, may be assigned to each document and stored in the document's metadata file*) (col. 9, lines 65-67 and col. 10, lines 1-5) [These documents constitute data being intercepted from the streams of network data and these data as objects will be reconstructed when reached their destination]. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include Piersol feature in Biebesheimer. One would have been motivated to do so in order to give the user convenience of a wide variety of criteria to perform customized search.

However Dugatkin discloses the capture system configured to intercept data from data streams, reconstruct the data, and store network transmitted objects according to a capture rule, that defines which objects are to be captured by the capture system (p. 3, para. [0036], [0051]). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include Dugatkin feature in Biebesheimer. One would have been motivated to do so in order to monitor traffic on a network.

Claim 2: Biebesheimer Piersol and Dugatkin disclose the method of claim 1 above, Biebesheimer further discloses the parameters definable through the search editor view include both indexed (*adaptive indexing resource solution and lookup*) (p.3, ¶ [0031]) and non-indexed (*context parameter with a broad range of attributes*) search criteria (p.3, ¶ [0033]).

Claim 3: Biebesheimer Piersol and Dugatkin disclose the method of claim 1 above, Biebesheimer further discloses the definable search editor view parameters include one or more of a plurality of search criteria, the search criteria comprising: a content type, a protocol (*inherent in a network environment*), a keyword (*search term*); and a word pattern (p.6, ¶ [0062], lines 20-34).

Claim 25: Biebesheimer Piersol and Dugatkin disclose the method of claim 1 above, Piersol further discloses wherein the search is of tags of stored objects (*data and metadata files are implemented according to XML specification, other programming language may equivalently be utilized such as HTML or SGML*) (col. 9, 15-20). One would have been motivated to do so in order to facilitate index search.

Claim 27: The claim incorporates substantially similar subject matter as claim 1, and is rejected along the same rationale.

Claim 28: The claim incorporates substantially similar subject matter as claim 2, and is rejected along the same rationale.

Claim 29: The claim incorporates substantially similar subject matter as claim 3, and is rejected along the same rationale.

Claim 32: The claim incorporates substantially similar subject matter as claim 25, and is rejected along the same rationale.

Claim 33: Biebesheimer Piersol and Dugatkin disclose the method of claim 1 above, Biebesheimer further discloses wherein the relevant information that describes the at least one object includes one or more of a plurality of fields, the fields comprising:

a protocol, an instance, a content type (*inherent in a network environment*) (p.6, ¶ [0062], lines 20-34), and Piersol discloses an encoding (*item 470*), a capture rule (*items 440,445*), an object signature (*item 410*), and a tag signature (*document capturer*). One would have been motivated to do so in order to give the user convenience of a wide variety of criteria to perform customized search.

4. Claims 4 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Biebesheimer et al. (US 2002/0107843 A1) in view of Piersol (US 6,978,297 B1) in view of Dugatkin (US 2005/0021715 A1) and in further view of Khan (US 7,185,192 B1).

Claim 4: Biebesheimer Piersol and Dugatkin disclose the method of claim 3 above, but do not explicitly disclose the search criteria include a source address, a destination address, a size range, and a temporal range. However, Kahn discloses “object attributes data field that contains values for various attributes and/or configuration information related to the object such as resource’s IP address and other network attributes...” (col. 20, lines 19-44) [in a networking environment, source and destination addresses, size and temporal range are criteria that one can consider inherent]. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include that feature in Biebesheimer. One would have been motivated to do so in order to give the user convenience of a wide variety of criteria to perform customized search.

Claim 30 incorporates substantially similar subject matter as claim 4, and is rejected along the same rationale.

5. Claims 5 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Biebesheimer et al. (US 2002/0107843 A1) in view of Piersol (US 6,978,297 B1) in view of Dugatkin (US 2005/0021715 A1) and in further view of Microsoft Outlook 2000 © 1995-2000, (hereinafter Outlook).

Claim 5: Biebesheimer Piersol and Dugatkin disclose the method of claim 1 above, wherein the definable parameters of the search editor view specify one or more of a plurality of search criteria, but does not explicitly disclose the search criteria comprising: an email source, an email destination, an email carbon copy, an email subject, and message keywords. However, Outlook discloses “a search criteria with different attributes field...” (Screen Shot 2). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include that feature in Biebesheimer. One would have been motivated to do so in order to give the user convenience of a wide variety of criteria to perform customized search.

Claim 31 incorporates substantially similar subject matter as claim 5, and is rejected along the same rationale.

Response to Arguments

6. Applicant’s arguments with respect to claims 1 and 27 filed on 07/23/2009 have been fully considered but are not persuasive.

As per claim 1 applicant argues:

Biebesheimer fails to disclose capturing information

In response, examiner respectfully disagrees and notes that Biebesheimer discloses (the iconic Context Selection Workspace 13 initially displays a small set of User Context Icons it has determined are most appropriate, captures the user's selection of the one that seems most fitting for the current user search session, and captures the user's actual query) (para [0030]) and further discloses in para. [0045] as the user works with the system, particularly through the Results Display Workspace 32 and the Detail Specification Workspace 22 his/her interactions are captured and stored in the User Interaction Records database.

Biebesheimer discloses a search editor where user can modify the parameters which constitute a rule in order to capture relevant user's query, *(the iconic Context Selection Workspace 13 initially displays a small set of User Context Icons it has determined are most appropriate, captures the user's selection of the one that seems most fitting for the current user search session, and captures the user's actual query)* (para. [0030] and fig. 4)

Applicant further argues that no reference of record provides for "...a search editor view to enable parameters of a search of tags of objects captured by the capture system to be defined, the capture system configured to intercept data from data streams, reconstruct the data, and store network transmitted objects according to a capture rule that defines which objects are to be captured by the capture system...

In response, examiner respectfully disagrees and notes that Biebesheimer discloses graphical user interface 22 which enables the user to define or change all the parameters associated with their query 131 and (single) selected user context 132...(para. [0065]) and Dugatkin in order to cure the shortfalls of Biebesheimer also discloses tags of objects captured by the capture system to be defined (para. [0071]) the capture system configured to intercept data from data streams, reconstruct the data, and store network transmitted objects according to a capture rule, that defines which objects are to be captured

by the capture system (p. 3, para. [0036], [0051]), wherein each tag is associated with at least one captured object and includes relevant information that describes the at least one object (para. [0071]) and a capture rule view to enable parameters of the capture rule to be defined (para. [0046]).

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Omoigui (US 2004/0230572 A1) System and method for semantic knowledge retrieval, management, capture, sharing, discovery, delivery and presentation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phenuel S. Salomon whose telephone number is (571) 270-1699. The examiner can normally be reached on Mon-Fri 7:00 A.M. to 4:00 P.M. (Alternate Friday Off) EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Weilun Lo can be reached on (571) 272-4847. The fax phone number for the organization where this application or proceeding is assigned is 571-273-3800.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
